PROJECT ROADMAP / 09 NOV 2026

HORSE RACING SIMULATION

From a working JRA career to a realistic racing world.

ALREADY PLAYABLE / STEPS 1-5

Full career loop
Breed, buy, train and race; owner, trainer or breeder.

Simulation foundation
Genetics, JRA calendar, betting, ~1,100 foals/year.

3D race broadcast
TV cameras, paddock, weather, sales ring and planner.

SUGGESTED BUILD ORDER

6 Stability & performance

NEXT PRIORITY

Background weeks / skip to date / faster simulation
Versioned saves + backups / settings / crash reports

GATE: season < 3 min; a 20-season save loads < 5 sec on your PC

↓

7 Racing realism

Jockey tactics + pace / gates / track bias + changing going
Stewards + whip rules / fatigue / photo finishes + dead heats

CHECK: race patterns vs JRA data | Jump racing: later decision

BUILD TOGETHER

8 Horse life & training

Trackwork + outside farms; injuries + vet care; gear, condition, ageing and retirement.

CHECK: work times, lay-offs, age curves

9 Business & ownership

Prize money + running costs; clubs + sales; owner licence, taxes, loans and awards.

CHECK: JRA money tables + sale results

↓

10 Breeding depth

Conformation + sire-line crosses / fertility + foal health
Shuttle sires / syndicates / pinhooking / sire rankings

CHECK: conception ~75-85%; realistic progeny funnel retained

↓

12 World, history & long-term play

Full graded calendar + NAR / overseas campaigns
Records / people careers / rival owners / scenarios + imports

GOAL: a living 30+ year save | Calendar before history; rivals before deeper sales

ALONGSIDE DEVELOPMENT

11 PRESENTATION

3D, broadcast & sound

01
Real racecourses
Tokyo, Nakayama, Kyoto, Hanshin first.

02
Jockeys & horses
Owner silks, riding poses, lead changes and tired gaits.

03
Race-day sound
Japanese + English calls, crowd noise and fanfares.

04
TV experience
Parades, replays, highlights and photo-finish images.

ChatGPT: assets
Claude: integration

REALISM IS THE FINISH LINE

32-36%	~3%	~0.4%
win a race	reach open class	win a G1

Existing JRA-wide funnel. Add checks in sim/tests; deviations over ~20% must be fixed or recorded before completion.

Measured, causal systems
Real figures; no hidden story rolls.

Uncertainty + repeatability
Player estimates; seeded outcomes.

Performance + approval
Fast seasons; test and approve each step.

TEAM

YOU
Priorities, play-tests, approvals

CLAUDE
Code, systems, calibration + tests

CHATGPT / CODEX
Assets + research / optional review

OPEN DECISIONS

Phase order / jump racing / Japanese voice approach / first course (Tokyo suggested)
